JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for in situ thickness measurements 641
– for interfacial free energy measurements 463
– for sublimation growth
– – of gallium nitride 10
– for silicon–germanium growth 99

Computer simulation
– by Monte Carlo study 441
– of BBO crystal growth melts 227
– of crystallization of macromolecules 653
– of dislocation density 81
– of gallium nitride on sapphire 131
– of growth 311
– of heat and mass transfer 564, 604
– of liquidus flow 140
– of particle growth 427
Convection 140, 150, 427, 469, 669

Dendritic growth
– of copper silver 690
Device characterization
– Bragg mirrors 15
– electronic materials 581
– heterojunction 269
– lasers 269, 505, 614
– quantum wells 505, 511, 705
– quantum wires and dots 279
– strained layers of gallium arsenide 269
Dissolution of
– C_{60} in CS_2 258
– lysozyme in water 258

Electronic materials, see Device characterization
Epitaxy, see Thin film growth

Heterojunction, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of growth 10, 117, 175, 240, 352, 417, 463, 497, 641, 669
– of interface control 62
– of nucleation 124, 240, 311
– of selenization of indium–copper alloys 196

Lasers, see Device characterization
Lasers, crystals for
– BBO 227
– ion host in fluorophosphate 366

Melt growth technique
– by Bridgman–Stockbarger method
– – of copper indium diselenide 377
– – of copper silver 690
– – theory of thermoelectric magnetohydrodynamic effect 150
– by Czochralski method
– – of germanium silicon 109
– – of hardystonite 205
– – of lanthanum tantalum germanate 279
– – of lead tungstate 391
– – of sillenite compounds 604
– – of titanate 205
– – theory of dislocation density 81
– by floating zone method
– – of calcium aluminate 361
– – of silicon 545, 554, 564
– – of strontium aluminate 361
– – of superconductors 573
– by flux method
– – of lithium niobate 403
– – of praseodymium strontium barium cuprate 159
– by static magnetic field
– – of silicon 545
– by uniaxial solidification
– – of binary alloys 490
– by zone melting
– – of copper silver 690
Microgravity, growth under
– of binary alloys 490
– of directional solidification 469
– of gallium arsenide 1
Morphological stability
– of paraffin crystals 641
– of polymer spherulites 683

Nucleation
– of islands 305
– of zinc oxide particles 190
Numbers
– Grashof 525, 690
– Hartmann 150
– Marangoni 545, 554, 564
– Peclet 427, 525, 690
– Rayleigh 525

Phase diagram, of
– of calcium phosphate 417
– of C_{60} 258
– of hardystonite 205
– of lysozyme 258
Precursor, for
– copper indium diselenide 196, 352

Quantum wells, wires and dots, see Device characterization

Solid growth technique
– by thermal annealing
– – of silicon 124
Solution growth
– by aqueous solution
– – of potassium chloride 409
– by electrodeposition
– – of nickel phosphate 456
– by flux method
– – of cuprate superconductors 159
– – theory of sub-monolayer annealing 497
– by gas anti-solvent
– – of ammonium perchlorate 622
– – of monosodium glutamate 622
– – of potassium nitrate 622
– – theory of step bouncing 669
– by low temperature method
– – of hydroxyapatite 251
– by sol–gel synthesis
– – of paracetamol 629
– – of zirconyl chloride octahydrate 398
Superconductivity materials, high T_c
– bulk
– – of praseodymium strontium barium cuprate 159
Superlattices
– of III–V compounds 15
Surface structure
– of strained layers 305

Thin film growth, epitaxy
– by atomic layer epitaxy
– – of gallium arsenide phosphate 75
– – of gallium phosphate 75
– – of zinc sulphide 708
– by chemical beam epitaxy
– – of gallium indium arsenide phosphide 505
– – theory of real time monitoring 323
– by enhanced migration
– – of indium gallium arsenide 705
– by liquid phase epitaxy
– – of silicon germanium 305
– by metalorganic molecular beam epitaxy
– – of indium phosphide 38
– by molecular beam epitaxy
– – of aluminum arsenide antimonide 15
– – of aluminum gallium arsenide antimonide 15
– – of aluminum nitride 23
– – of gallium nitride 23, 31
– – of indium gallium arsenide 279
– – of silicon carbide 581
– – of silicon germanium 99
– – theory of nucleation with desorption 311
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of cadmium telluride 535
– – – of diamond 338
– – – of germanium 525
– – – of germanium silicon 117, 294
– – – of parylene films 385
– – – of silicon carbide 163, 175
– – – of III–V compounds on silicon 89
– – – of zinc sulphide 708
– – through metalorganic chemical vapor deposition
– – – of gallium antimonide 69
– – – of gallium arsenide 43
– – – of gallium nitride 62
– – – of indium gallium arsenide 511
– – – of lithium tantalate 217
– – – of magnesium selenide 289
– – – of mercury cadmium telluride 594
– – – of sulphur-based II–VI compounds 95
– by vapor transport of selenium
– – of copper indium diselenide 196

Vapor growth technique
– by chemical transport
– – of gallium arsenide 1
– – of laminar tin selenium crystals 347
– – of silicon germanium 117
– by combustion flame method
– – of diamond on silicon carbide 183
– by evaporation and condensation
– – of aluminum nitride 284
– – of cadmium telluride 519
– – of copper indium diselenide 352
– by hydride chemical vapor epitaxy
– – of gallium nitride 49
– theory of tetrapod particle growth 190
